## New High Speed Solutions Catalog Available

Sabritec has released a new High Speed catalog featuring the latest high performance Quadrax, Twinax and Fiber Optic interconnects featuring the latest high performance Quadrax, Twinax and Fiber Optic interconnects

The catalog includes Sabritec's new miniature Size 10 Quadrax/Twinax Contacts. These contacts offer the best size to performance relationship in the industry.

The precise control of the geometry within the contact gives rise to an ultra high performance contact that is only limited by the cable or PCB the system designer attaches to it. S-Parameter data generated from the 3-d model show less than 0.2dB loss, per mated pair, through a 10 GHz sweep, making this contact ideal for any of the high speed protocols on the market today. Indeed Fibre Channel, Ethernet, Firewire (IEEE 1394) or other custom protocol driving multi-gigabit data rates can take advantage of the electrical performance designed into each contact. The Size 10 gives the system designer new options for all their rugged high speed I/O.

### Features:

- 30% smaller than standard Size # 8 quadrax and twinax contacts. 25% smaller than Size # 9 quadrax and twinax contacts
- Allows for more high speed signals per square inch of panel space
- Offered in 100 ohm Quadrax and/or 100/150 ohm differential pair Twinax
- These contacts are available in MIL-DTL-38999 and Rugged D-Sub formats.

Also available in this catalog are Sabritec's patented passive equalizer technology, in-line quadsplitter, Firewire 1394b, Backplane Ethernet, Micro Quadrax and Twinax, Micro-D Twinax and 6,000 mate Dura Speed connectors. The fiber optic line includes the ARINC 801 Termini, Active Electro Optical Transceiver, Expanded Beam Size 5 and 12, Butt-Joint and Plastic Optical Termini.

### Congressman John Campbell Visits Sabritec

Sabritec was pleased to receive a visit from Congressman John Campbell and his staff to its facility on August 30th.

During this visit, Sabritec Management was able to share with the Congressman its position in the military marketplace and the impact that the federal budget has not only on the military programs but on the component manufacturers as well. In addition to the meeting with Sabritec Executives and the town hall meeting, Congressman Campbell was able to tour Sabritec's state of the art manufacturing facility which includes world class machining and ceramic capacitor manufacturing capabilities.

### Terry Mohr Director of Quality Assurance and Business Systems

Sabritec is pleased to announce that Terry Mohr has joined us as Director of Quality Assurance and Business Systems..

Terry will oversee Sabritec's quality systems, leading the continuous improvement process and maintaining quality certifications for the company. As a member of the executive management team, Terry will develop standards and implement systems and processes that will allow Sabritec to consistently meet and exceed customer expectations. He will manage the team of quality professionals and provide support to all functional groups; as it applies to product quality and business systems

development.

Most recently Terry was providing quality consulting services to various companies and was Quality Assurance Director at ACCO Brands Incorporated. Prior to ACCO, Terry held Quality management positions with Symbolic Displays Incorporated, Saint Gobain Plastics and Northrop Grumman where he was responsible for the quality management system and achieving ISO 9001 and AS9100 certifications.

Terry has a Master's degree in Management, a BS in Aviation Technology and an AS in Aviation Maintenance. He is also a certified Lead Auditor.
